

Florida Film Solutions provides value for Tampa Bay home and business owners!

Florida Film Solutions serves the Tampa Bay region and helps home and business owners add value to their property one window at a time through installation of high quality window films. More and more property owners are turning to services and products that will increase value and help them save significant amounts of money. An added savings includes window film rebates from local energy companies for having energy efficient window film installed.

Florida Film Solutions offers an array of window film products that will reduce buildings' energy consumption, as well as block annoying glare, heat, and damaging UV rays from entering through the windows. In Florida, a home or business cooling cost can account for up to 50-60% of its energy consumption.

Windows are one of the least efficient parts of any home or business; therefore, window film is a viable option for many Floridians, offering major energy cost savings and other added benefits. Windows transmit substantial amounts of heat, visible light, and damaging UV rays resulting in higher temperatures inside the building. When the HVAC system is operating in a structure without efficient window film, the unit must run much longer and harder to maintain adequate temperatures. This will certainly increase energy cost along with wear and tear on the HVAC system.

To help solve these problems many customers have chosen window films offered by **Florida Film Solutions**. A wide variety of window film shades and natural tones is offered to meet the specific needs of the customer. Furthermore, security window films even offer a degree of safety in the event of hurricanes or "smash and grab burglary". Security films are thicker films with an extremely strong adhesive that bonds with the glass. If the glass is broken security film holds the glass fragments together and can even keep the window unit intact. Security films, too, come coupled with the sun protection features to achieve all the benefits of solar control window film.

In closing it is imperative to mention that many of the energy saving and security window films available are much more sophisticated than the traditional window tinting of the past. **Florida Film Solutions** product line consists of window films with the purpose of maintaining your natural view and the aesthetics of your home or business. **Florida Film Solutions** guarantees work performed and all the window films are backed by a manufacturer lifetime residential warranty and ten to fifteen years for commercial applications.
